

Hahnemühle

Mouth and nose cover "HaMuNa® Care"

Virus and bacterial infections are often transmitted from a sick person to a healthy person by spread droplets. They are dissolved from the mucous membranes when speaking, sneezing, or coughing and distributed in the close vicinity. However, if these droplets are immediately absorbed by an absorbent paper in front of the mouth and nose, the risk of infection for other people is reduced.

Hahnemühle, an expert in high-quality filter papers, offers a perfectly aligned covering for the mouth and nose. HaMuNa® Care is gentle to the skin and can be used anywhere, e.g. on public transport, in supermarkets, waiting rooms and public buildings. It gives a sense of security if a normal mask is not available as in schools, shops, etc. As a barrier, it prevents people passing the infection through coughing and corresponds to hygienic behaviour in the case of an infectious disease. It is designed for short-term use.

A special feature of the ergonomically flexible mouth and nose protection is the absence of plastic and fleece materials and its sustainability and environmentally friendly disposal. HaMuNa® Care is a registered trademark. A patent has been applied for material and design.

Can be individually printed
and painted!
